

Crush Bottlenecks and Get Your IT Teams Moving at Cloud Velocity

With Torque, IT Operations becomes agile, accountable, and responsive. Auto detect and remove idle and unused cloud instances to reduce your cloud costs by 50% or more.

Transform IT Operations into a consultative service provider for all users and teams. Eliminate bottlenecks and extended wait times by delivering environments as- a-service. Optimize the infrastructure lifecycle with complete transparency and seamless governance to prevent cloud waste proactively.

Blow away provisioning bottlenecks

Eliminate manual step-by-step work that kills productivity. Automate and orchestrate provisioning with approved reusable templates for cloud environments.

Bolster infrastructure security

Leverage pre-authorized blueprints that automatically implement security parameters, approvals, and policy guardrails. Sequence and automate security and code scan runs during provisioning to ensure compliance

One-click access, secure and on-demand

Empower users with one-click role-based access (RBAC) and deploy cloud infrastructure with guardrails for type/size and what, when, and where assets can be launched.

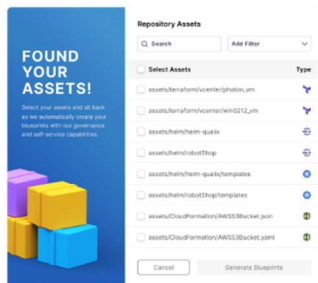

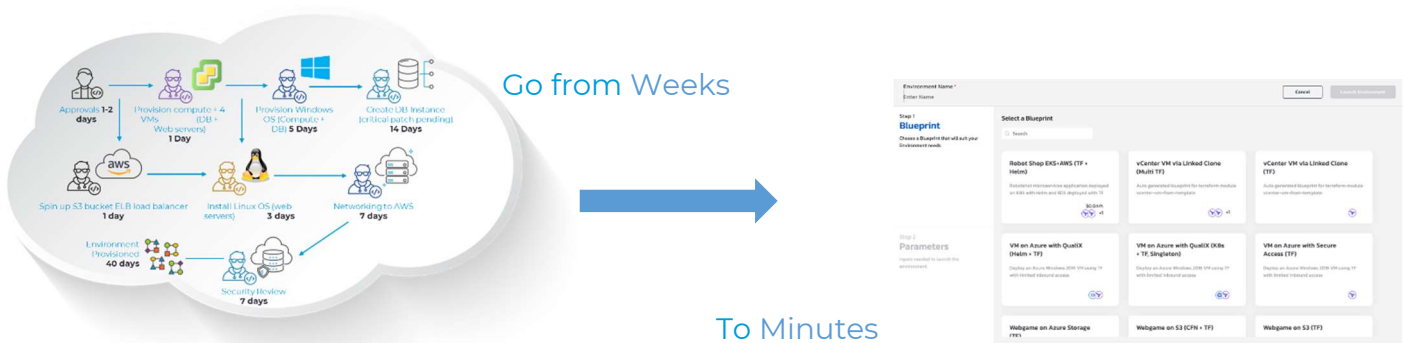

Eliminate cloud cost waste

Reduce cloud costs with real-time visibility and reporting of savings opportunities. Identify and remove idle instances and customize policies to deny over-sized or unapproved cloud resources.

“90% of companies today retain some level of centralized operations managed by IT teams supporting both centralized and distributed development teams.”

Infrastructure Provisioning

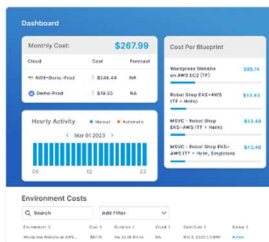

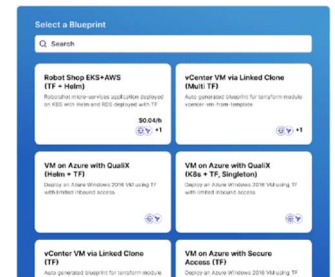

Automate Environment Provisioning

Spend less time provisioning and managing infrastructure. Quali Torque leverages your IaC and other configurations to create reusable templates defining complete environments that can be deployed and maintained continuously, eliminating the need to provision infrastructure for common use cases ever again.

Secure Self-Service Access

Reduce ticket requests for basic cloud access. Once approved by IT, all environments are accessible via Quali Torque's self-service catalog—and integrations with your teams' preferred toolset—so internal staff can deploy and operate cloud infrastructure on-demand. Role-based permissions, encryption for cloud secrets, and automated drift detection give IT the assurance that all cloud deployments align with their approved configurations.

Real-Time Visibility and Cloud Cost Waste Elimination

Enhance the value of your FinOps data with visibility into real-time cloud deployments. Since Quali Torque orchestrates and deploys your cloud infrastructure, you can see actively deployed cloud resources at any given time and track and forecast real-time costs by cloud, team, or tag to identify anomalies before you receive the cloud bill.

Seamless Cloud Governance

Reduce cognitive load with automated enforcement of cloud governance policies over costs and configurations. Deploying cloud resources via Quali Torque allows you to deny the deployment of any resource that violates your standards and automate deployment and termination of cloud resources to support uptime while preventing zombie infrastructure.
