

Supercharge Solution Engineer Productivity to Accelerate your Sales Cycles

With Quali Torque you can sell smarter and sell faster. Deliver demos and customized PoCs 5X faster

Quali's Torque platform increases sales cycle velocity by improving the effectiveness of your Solution and Sales Engineers with pre-configured demo templates, available with a single click, to deploy complex multi-cloud infrastructure consistently and securely.

Sell faster by empowering your sales and solution engineers

Spin up demos in seconds. Make live demos bullet proof. No more broken demo embarrassing moments.

Sell more with more demos delivered consistently and reliably

Launch demos with a single click from a catalog of pre-configured blueprints. Automated deployments work every time. Infrastructure used consistently by all users.

Sell smarter by focusing on the customer not the infrastructure

Execute great demos and PoCs targeting specific customer challenges. Eliminate wasted time for preparing and manually configuring cloud infrastructure or security settings.

Sell efficiently by optimizing cloud usage

Use cloud without risk. Stop paying for unused or under-utilized cloud instances. Pro-actively manage cloud access with RBAC and ensure resources are secure and used for priority projects. Report cost and usage by user, team, project.

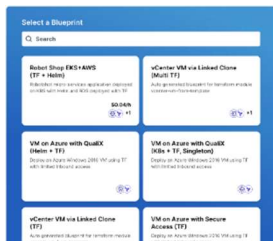

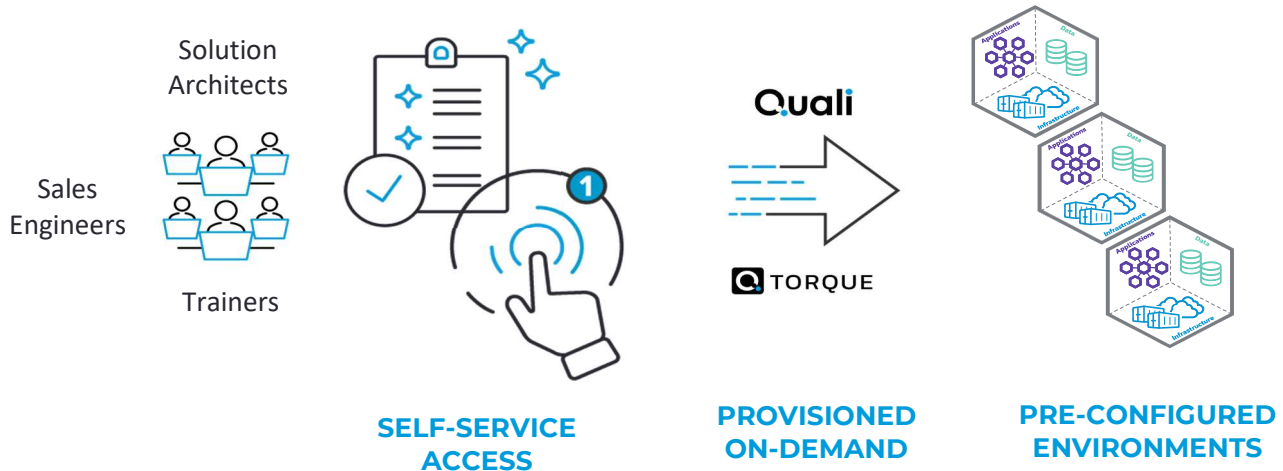

“By using Torque for our PoC and Demo systems, **we saved 55% in cloud costs over 3 months.**”

Torque enables our Solution Engineers to **orchestrate demo** environments **in one-click** without any DevOps knowledge”

Secure Access to Demo Environments On-Demand

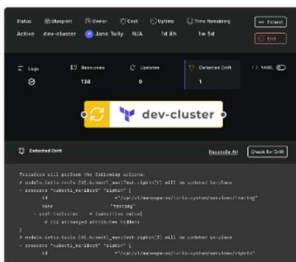

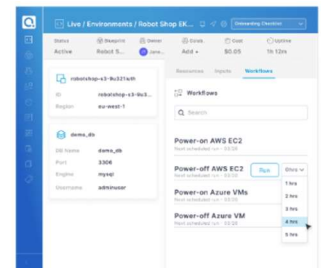

Secure On-Demand Access

Eliminate ticket requests and manual provisioning work that slows your demo teams down. Give your teams secure self-service access to a catalog of pre-configured demo environments with role-based permissions and custom governance policies to prevent unauthorized activity.

Automate Demo Infrastructure Operations

Reduce cognitive load so your engineering teams can focus on executing high-quality demos with minimal distractions. Pre-schedule automated deployment and termination of demo environments to ensure uptime while preventing idle cloud resources that waste budget.

Continuous Demo Optimization and Updating

Resolve issues that disrupt performance proactively. Automatically detect configuration drift, unexpected changes, and failures in your demo environments, and rack and mange pushing updates to pre-approved environments to maintain consistency.

Re-usable Infrastructure Templates

Maintain consistency and repeatability at scale. Torque imports your existing infrastructure configurations to create reusable templates for complete demo, POC, and testing environments that your teams can deploy on-demand.
